

Assembly Instructions for Adirondack Chair

Tools needed for assembly: Phillips head screwdriver

Step 1. Lay out the parts and identify each one by comparing them to the drawing below.

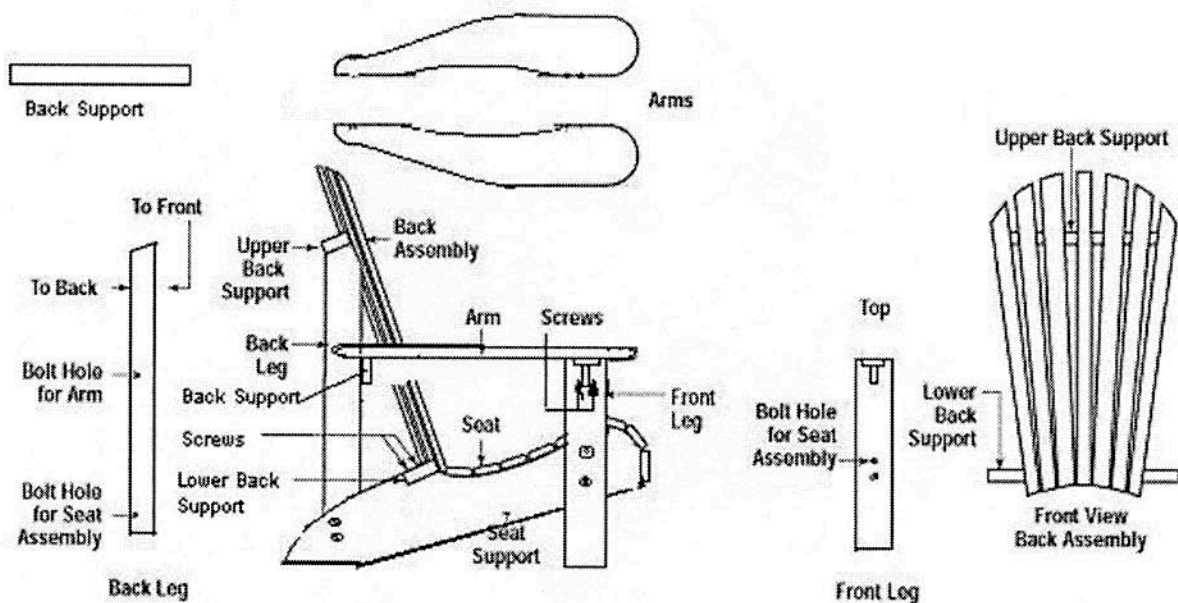

Step 2. Fasten the two front legs to the seat support with four bolts.

Step 3. Fasten the back legs to the inside of the seat support with four bolts.

Step 4. Place the back on the seat support with the upper back support on top of the back legs. Fasten with four screws through the lower back support into the seat support. And then fasten with four screws through the upper back support into the back legs.

Step 5. Place the arms on the front legs. Make sure that the arms are horizontal and fasten with the four screws from the inside of the back legs into the arms. Fasten with four screws through the holes under the front legs into the arms.

Step 6. Place horizontal back support to the front side of the back legs and under, close to arms. Fasten with four screws through the holes on the back support.
